BioGolf® NPK 13-5-8

- a fertiliser in harmony with nature for fertilising of fairways

BioGolf® NPK 13-5-8 is a liquid fertiliser (patent applied for) which, apart from its high content of inorganic micro- and macronutrients, has a very high content of carbohydrates.

USE:
BioGolf® NPK 13-5-8 is used throughout the growth season on fairways. The nutrient composition provides fairways grass with the absolutely optimal combination of both macro- and micronutrients. Apart from supplying nutrients, BioGolf® NPK 13-5-8 can be expected to significantly reduce the frequency of fungal attacks because the grasses' ability to ward off and resist fungal attacks is greatly increased.

May not be used on greens and tees.

APPLICATION:
Apply BioGolf® NPK 13-5-8 undiluted or mixed with any quantity of water, easily, simply, rationally and precisely with a standard field spray, preferably fitted with nozzles producing large drops, from TeeJet. Max. dose per application 300 kg (243 l)/ha.

BIOGOLF NPK 13-5-8:
- Provides grasses with all necessary macro- and micronutrients
- Increases the grass's sugar content
- Reduces fungal pressure
- Increases the grass's ability to resist fungal attacks
- Indirectly increases the plants' root network
- Increases the plants' nutrient absorption
- Reduces the leaching of nutrients
- Improves the soil structure

DOSE:
as per fertilising schedule

Total N	$CO(NH_2)_2$	NH_4	NO_3	P_2O_5	K_2O
