

BioNutria
DANMARK

Recommended use of

BioNutria products in sugar beet

Our products are used as insurance against micronutrient deficiencies. Our general recommendation is to use in all 8-10 l BioCrop Opti^{XL}, 2-3 l BioMangan 170 NS^P and 2-3 l BioNutria Bor 150 during the growth season.

A treatment scheme for sugar beet could be:

May : AS 12-15	2 l BioMangan 170 NS ^P + 2 l BioNutria Bor 150 + 2 l BioCrop Opti ^{XL}
June : AS 30	2 l BioMangan 170 NS ^P + 2 l BioNutria Bor 150 + 2 l BioCrop Opti ^{XL}
July: AS 48	2 l BioCrop Opti ^{XL}
August: AS 48	2 l BioCrop Opti ^{XL}

On some soils we find problems with cobber deficiencies and there we use our product BioMangan 170 NS^{CU} and BioCrop Opti^{CU} with extra contents of cobber.

Our products are easy to use. They can be blended with just about all other plant protection agents, so the addition of micronutrients requires no extra applications. This saves the work process and also helps to get both plant protection and micronutrients out on time, which is very important.
